What's inside my eye?

Ever wondered how your eyes help you see? Your eyes have different parts that work together like a team! Let's explore them.

Look at the eye diagram and use the clues to guess which part of the eye we are talking about!

(Hints: Pupil, Optic nerve, Iris, Lens, Retina, Cornea)

1. I'm the colored part of your eye. I help control how much light enters. Who am I?
2. I'm the opening in the center of your eye. Light passes through me. Who am I?
3. I'm the clear front covering of your eye. I help focus light. Who am I?
4. I'm a clear, flexible part that changes shape to help you focus. Who am I?
5. I'm at the back of your eye. I turn light into signals for your brain. Who am I?
6. I carry messages from your eye to your brain. Who am I?

Bonus Mission: Eye Color Detective!

Look into a mirror and observe the colored part of your eye.

What color is your iris? _____

Can you name two different eye colors? _____
